

FLOPPY DISK DRIVE EMULATOR

3 1/2, 5 1/4 and 8 inches floppy disk drives replacement

Most of floppy disk drives are no longer manufactured. The few still manufactured ones use new connection technologies. Therefore, users have to get their floppy disk drives replaced by second hand ones, less and less reliable.

Datastorage, worried about the everlastingness of these systems, has developed the DTX200 in order for these customers to recover the reliability of their device.

THE DTX200 CAN REPLACE ALL THE FLOPPY DISK DRIVES, FOR EXAMPLE :

8" DRIVES : SHUGART SA850, CDC BRB8A,
YE DATA , ...

5 1/4" DRIVES :
Full height : SHUGART SA400, MPI 92S,
TANDON TM100, ...

Semi-height : TEAC : FD-05xx, FD-55xx, FD-235xx,
EPSON : SD-681L, ...

3 1/2" DRIVES : ALPS : AL FD 7xx,
PANASONIC : JU-25xxx,
SONY : MPF-520xx, MPF-920xx, ...

And all other Floppy disk drives...

YOUR COMPLETELY SAFELY DATA...

The Datastorage DTX200 use a **USB key** or a **Compact Flash card** to stock your data. The access are **ultra-fast**, and the risks of drive failure are almost **non-existent**, because the DTX200 has no mechanical parts moving. A **preventive detection system** is incorporated to deal with an eventual failure.

You could use the USB key or the Compact Flash card as you used your floppy disk except you can now stock the equivalent of up to **ten floppy disks**.

You will be able to choose the various floppy disks thanks to the **addressing reconnaissance**, as an optional extra.

LESS POWER CONSUMPTION

You will **save substantial power** thanks to the DTX200 less power consumption. Less heat is produced, therefore the components have a **longer lifetime** and the system becomes **more reliable**.

EASY INSTALLATION

The Datastorage DTX200 uses as much space as a **3 1/2" floppy disk drive**. It will be mechanically adapted for your larger ones. The DTX200 is pre-programmed to have the **same features** with the drive to replace.

Each floppy disk drive using a specific connection technology, an **adaptation card** will be developed for each of your drive. It only has to be connected in place of the replaced drive, in a completely **transparent** way for your system.

EXTENDED WARRANTY

The Datastorage DTX200 has a **two years warranty with workshop return**, whilst the floppy disk drives are no longer repaired.
